Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Viktorsson et al. (US Patent No. 6,397,080) in view of Schmidt et al. (US Patent No. 6,484,037).

Regarding claim 1, Viktorsson discloses a conversation support system for supporting a plurality of users in having a virtual conversation in a shared virtual space built and provided on a computer network, comprising: enrolling means for enrolling an avatar of a logged-in user into said shared virtual space (see abstract); imparting means for imparting a virtual mobile telephone to each avatar in said shared virtual space, said virtual mobile telephone being usable within said shared virtual space (see col. 3, lines 4-34); however, Viktorsson fails to explicitly teach determination means for determining, in response to a call to a virtual mobile telephone, whether a calling party who originated said call exists from a telephone in said shared virtual space, (2) from a telephone in another virtual space, or (3) from a telephone in the real world, and connecting means for executing connection processing in accordance with the determination made by said determination means.

Schmidt teaches determination means for determining, in response to a call to a virtual mobile telephone, whether a calling party who originated said call exists from a telephone in said shared virtual space, (2) from a telephone in another virtual space, or (3) from a telephone in the

real world, and connecting means for executing connection processing in accordance with the determination made by said determination means (see col. 10, lines 1-31). It would have been obvious to one of an ordinary skill in the art at the time the invention was made to provide in response to a call to a virtual mobile telephone, whether a calling party who originated said call exists from a telephone in said shared virtual space, (2) from a telephone in another virtual space, or (3) from a telephone in the real world, and connecting means for executing connection processing in accordance with the determination made by said determination means as taught by Schmidt used in combination of Viktorsson to provide a virtual environment users, which have entered the virtual world, can communicate with other users by means of an avatar.

Regarding claim 2, Schmidt discloses the conversation support system according to claim 1, wherein, if the determination means determines that said calling party originated said call from said telephone in the real world, said connecting means establishes a connection with said calling party through a public telephone network in the real world or executes message transfer (see col. 7, lines 1-52).

Regarding claim 3, Viktorsson discloses the conversation support system according to claim 1, wherein, if the determination means determines that said calling party originated said call from said telephone in said another virtual space, said connecting means establishes a connection with said telephone in said another virtual space or executes message transfer (see col. 3, lines 35-61 and col. 4, lines 1-9).

Regarding claim 4, Viktorsson discloses the conversation support system according to claim 1, wherein said connecting means receives said call from said telephone in the real world

Art Unit: 2173

or a virtual telephone in said another virtual space and connects the received call to a virtual mobile telephone of a called avatar in said shared virtual space (see figures 1-2).

As claims 5-14 are analyzed as previously discussed with respected to claims 1-4 above.

Regarding claims 15-17, Viktorsson discloses a conversation support method for supporting an activity of an avatar in a shared virtual space built and provided on a computer network, comprising: receiving a request for sending a message from said avatar; determining whether a destination of said message exists in the real world; and executing connection processing in accordance with the determination made by the determining step (see figures 1-2).

As claims 18-21 are analyzed as previously discussed with respected to claims 1-4 and 15 above.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. (see PTO-892).
